

When reprocessing Reusable Medical Devices (RMDs), healthcare facilities must comply to *AS/NZS 4187:2014 Reprocessing of reusable medical devices in health service organizations*. Are you meeting the requirements for sampling to ensure your water is safe and compliant?

HydroChem can help you meet your water quality testing requirements for baseline analysis and ongoing monitoring as per your implementation plan. This will include final rinse water for manual and washer disinfectors, and feed water to steam sterilisers.

## Pathway to compliance\*

|                     |   |
|---------------------|---|
| <b>Milestone 1:</b> | Gap analysis of compliance to AS/NZS 4187 by <b>30 June 2021**</b>                |
| <b>Milestone 2:</b> | Documented implementation plan to achieve the standard by <b>31 December 2021</b> |
| <b>Milestone 3:</b> | Full compliance with AS/NZS 4187 deadline <b>31 December 2022</b>                 |

\*Ref: Advisory AS18/07: *Reprocessing of reusable medical devices in health service organisations*.

\*\*Baseline water quality testing must be completed prior to the Milestone One deadline to remain compliant.

## HydroChem provides:

- Sample collection equipment, materials, and bottles, with compliant PPE
- Aseptic sample collection and transportation
- Accurate chain of custody
- NATA accredited Testing
- Specific testing for atypical Mycobacterium
- Immediate out-of-specification alerts
- Laboratory report
